Company

Cargo Service GmbH (CargoServ) was founded on 1 April 2001 as a 100 % subsidiary of Logistik Service GmbH (LogServ). LogServ a full-service provider to the industrial logistics industry and has provided many years of service to the domestic large-scale industry. As a private railroad transportation company, CargoServ offers alternative railroad strategies for block train freight transportation on the public railroad network.

In April 2001 under the brand name CargoServ, LogServ completed the first private freight transport on a public railway line. It was a lime train from Steyrling to voestalpine Stahl in Linz. Continuous expansion of railway sector services performed by CargoServ increased the freight volume from 700,000 tons of raw materials and finished products in the first fiscal year to 5 million tons in the most recent business year. This corresponds to approximately 170 trains a week. Since April 2012, CargoServ has been performing as a full-capacity railway transport company with freight permits.

Two thirds of the entire Austrian freight transport volume either originate or terminate on a feeder line. CargoServ contributes its expertise in the field of feeder lines to the development of overall strategies in railway freight services and supports its customers in optimizing their own railway logistics processes. A strategic objectives of CargoServ with one of the highest priorities is sustainably saving costs for voestalpine Stahl GmbH in Linz while strengthening its presence in the third-party market.

CargoServ uses 100% renewable energy from Austria for all of its railway transports.
